

## TRANSPONDER FITTING & PLACEMENT

You will be provided with a hire Transponder & Bracket at sign in.

This records your lap times and position in each race.

This needs to be attached to the front fork (clutch side), in behind your bikes number board.

The transponder should be fitted with the R-Clip at the top as it is sending a signal to the an aerial dug in the ground at the finish line.

Please use the third zip tie provided around the fork and transponder after mounted on your bike.

Results will be posted on the results board shortly after each race, and available online after the event on via the Mylaps Speedhive App. A link to this is on our website (under results page).

If the club have available personnel, the transponder & bracket will be cut off as you exit the track after the last race. If you don't take part in the last race, or if for any reason it is not cut off, it is your responsibility to return both the mounting bracket and transponder.

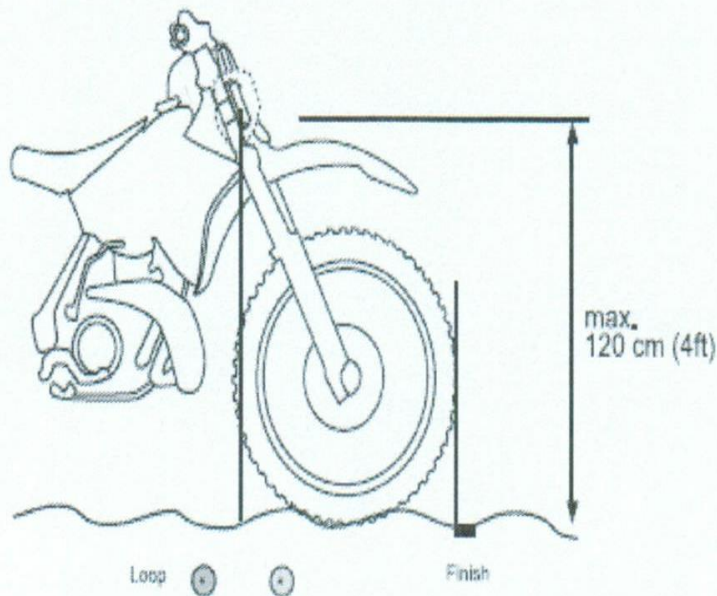

The cost for replacement of a transponder is approximately \$650 and \$25 for a bracket.

If you go home with it by mistake please courier back to:

Adele May, Timing Tech, 38 Davisons Road, 2RD Timaru 7972.

Please ensure that you get a track and trace number and provide the tracking number.
